

CONCERNED HOMEOWNER,

Our awareness of germs, dust-mites and viruses especially have been increasingly heightened during the current public health crisis.

You scrub, you clean, you bleach, you disinfect, but what about what's in your air?

We are seeing news channels reporting on the use of UV-C lamps in public places to potentially eradicate the virus that's spreading throughout the U.S.

In-duct ultraviolet systems treat moving air streams in heating, ventilation, and air-conditioning (HVAC) systems to **inactivate** airborne microorganisms.

Yes, you can have one installed right in your home.
